

Project Summary

Building Type	Commercial - RCC
Consultant	T.N. Consultant
Main Contractor	Alfa System & Services Pvt.Ltd
MEP Contractor	Alfa System & Services Pvt.Ltd
Services	HVAC

Featured Products

Standard Hanger

PROJECT DETAILS

ATS Pristine is a premium housing development by the ATS group, located in the greater Noida area, right next to the Yamuna Expressway. The 8 acre campus has 950 apartments and 14 villas, with facilities like a fully equipped gymnasium, clubhouse, swimming pool and gardens with jogging trails.

Gripplle has been specified by the client for use on all future projects. To ensure that their projects meet an exceptionally high standard they require good quality products to be used, which makes Gripplle the ideal choice for them.

In addition to being a high quality product, Gripplle systems are the preferred choice by the client for suspension of HVAC ducting as they facilitate a reduction in installation time as well as in the labour cost. The traditional method for this type of installation is threaded rods fastened to strut channel. Installation of a single line of duct takes around 60 mins, and usually 4 to 5 people are required to do the installation. Using the Gripplle system, erecting a single line of duct takes only around 20-25 min with around 2 people being enough to complete the work.

“Using Gripplle made installation very quick and required significantly less labour for completion of work. Gripplle helped in reducing man hours by a significant margin. Also the flexibility to do the alignment as an added advantage.”
