

CASE STUDY

MGM City Center Lab
Las Vegas, Nevada

Project Summary	
Building type	Hotel/Casino
Contractor	Fisk Electric
Building structure	Concrete
Services	Cable Tray on Stut

Featured Products	
<p>Trapeze</p> 	<p>Stud End Fixing</p> 

PROJECT DETAILS

The MGM MIRAGE CityCenter is truly a “city within a city”. In addition to hotels & residences, a casino, retail facilities, and convention center, it also has its own fire station, an on-site power plant, and tram system. It covers 68 acres, contains 7.4 million square feet, has utilized over 8,000 construction workers, and cost over \$11 billion.

GripplE was the choice to hang cable tray throughout the 1 million sq. ft. Convention Center portion of the CityCenter project. Trapeze fasteners were used with 3/8” stud end fixings on 40 ft cable lengths. Prior to deciding to use

GripplE on this job, the electrical contractor did a side by side test in two 300 ft corridors: one team installed using GripplE, and one team installed using threaded rod. The threaded rod team took eight days to complete their installations, while the GripplE team took only two days.

“GripplE hangs nice and straight, even when angled around other services. Threaded rod can’t do that!”

- Fisk Electric
